Allegheny County
African American Mental Health Resource Guide
WHAT IS MENTAL ILLNESS?

A mental illness is a medical condition that affects a person’s thinking, feeling, or mood. It can also disrupt someone’s ability to relate to others and function on a daily basis.

Mental illnesses can affect people of any age, race, religion, or income.

1 IN 5 AMERICANS IS DIAGNOSED WITH MENTAL ILLNESS EVERY YEAR

www.namikeystonepa.org
Experiences will differ, but mental illnesses are treatable and people diagnosed with a mental illness can have relief from their symptoms by actively participating in an individual treatment plan.
Common Types of Mental Illnesses

**Anxiety disorders** are a group of related conditions, each having unique symptoms. However, all anxiety disorders have one thing in common: persistent, excessive fear or worry in situations that are not threatening.

**Substance use disorders** — the repeated misuse of alcohol and/or drugs — often occur simultaneously in individuals with mental illness, usually to cope with overwhelming symptoms. The combination of these two illnesses has its own term: dual diagnosis, or co-occurring disorders. Either disorder (substance use or mental illness) can develop first.

**Traumatic events**—such as an accident, assault, military combat or natural disaster—can have lasting effects on a person's mental health. While many people will have short term responses to life-threatening events, some will develop longer term symptoms that can lead to a diagnosis of **Posttraumatic Stress Disorder (PTSD)**

**Bipolar disorder** is a mental illness that causes dramatic shifts in a person's mood, energy and ability to think clearly. People with bipolar experience high and low moods—known as mania and depression—which differ from the typical ups-and-downs most people experience.

**Depressive disorder**, frequently referred to simply as depression, is more than just feeling sad or going through a rough patch. It's a serious mental health condition that requires understanding and medical care.

**Obsessive-compulsive disorder (OCD)** is characterized by repetitive, unwanted, intrusive thoughts (obsessions) and irrational, excessive urges to do certain actions (compulsions). Although people with OCD may know that their thoughts and behavior don’t make sense, they are often unable to stop them.

**Schizophrenia** is a serious mental illness that interferes with a person’s ability to think clearly, manage emotions, make decisions, and relate to others. It is a complex, long-term medical illness.

Healing is Possible 

WITH THE RIGHT RESOURCES
Therapists
A person trained in the use of psychological methods for the treatment of mental or emotional problems.

Counselors
Focus may be on problem solving or on learning specific techniques for coping with or avoiding problem areas.

Psychiatrists
Use talk therapy, medications, and other treatments to treat people with mental health conditions.

Psychologists
Can make diagnoses and provide individual and group therapy.
HOW TO ACCESS YOUR INSURANCE TO FIND SERVICES.

Check your description of plan benefits—it should include information on behavioral health services or coverage for mental health and substance-use diagnoses. If you still aren't sure, contact your insurance company directly and ask to speak with customer service or a "Health Concierge."

HOW TO MAKE THERAPY AFFORDABLE

1. First, check your insurance. Ask your therapist about sliding scale options, discounted rates, or shorter sessions.

2. Look into community mental health centers.

3. Check out online therapy services or see if your therapist offers online sessions.
Let's Talk About H.E.R. Therapy
